

Time to Switch to the 'Thinking' Cap!

The new e-cap is the most intelligent vent cap ever, fully protecting furnaces from moisture, dirt, debris & other obstructions.

Introducing the e-cap – the patented new vent cap designed to improve air flow and eliminate excessive moisture and debris that rust or ruin high-efficiency gas furnaces, tankless hot water tanks, plumbing, or other PVC-vented installations.

A Smarter Cap for the Smartest Contractors

Under-protected pipes or P-traps can still allow moisture, debris or animals down the intake and vent flue into HVAC and other equipment, shortening the life of the unit and damaging a homeowner's investment. Only the e-cap offers all of these advantages –

- Superior design, function & price to conventional concentric vents
- Faster & easier to install than P-trap vents
- Resistant to heat, cold, precipitation or UV radiation
- Protects furnace motor & interior from damaging moisture & debris
- Promotes unrestricted air flow of both Intake and Vent flue – will never freeze-up with condensation
- Precisely & quickly fits 1-1/2", 2" and 3" PVC pipe with PVC glue
- Works perfectly in either vertical or horizontal flue pipe installations
- For use on all PVC-vented high efficiency applications: HVAC exhaust and intake, plumbing, Radon gas venting & high-efficiency tankless water heaters

Smarter Furnace Installs Begin When You Put on the 'Thinking' Cap

Seeing is believing! Go to www.ecapvent.com to see for yourself how fast, easy, affordable, attractive and smart it is to switch to the e-cap.

E-Cap, at the top in design, function and affordability!
